ERD - Version 1

ERD - Version 2

Day 1 - Tuesday

- Made Jira board
- Created risk assessment
- Created ERD's
- Feature-1: Created all necessary SQL tables and dummy data

Day 2 - Wednesday

- Feature-2: Expanded the java files for customers to have address, postcode and email for each customer
- Feature-3: Created java files for items
- Feature-4: Started working on orders.

Day 3 - Thursday

- Feature-4 (still): Got orders mostly working, except for add/remove and costs
- Feature-5: Completed add/remove and cost methods. Orders finally working
- CRUD for customers, items and orders has been achieved... or has it?

Day 4

- Feature-6: Modified customer tests to get them to work with my expanded tables
- Took me way too long to realise that the DAO tests were accessing a separate database so I had to modify that
- Realised my delete function for customers(and items) wasn't actually working!
- Managed to get the tests done and fixed the delete methods in the end

The Weekend

- Feature-7: Created tests for items and orders
- Could not find a way to mock customer and item DAO's in order controller tests. Have left the old code as comments
- Learned some of the intricacies of lists from the order controller update test
- Created ReadMe

Today(during lunch maybe)

- Feature-9: Add risk assessment and this presentation to the repo
- Merge everything into main

Questions!
